

The World of the Future

What will change?

With the help of today's scientists many things will change:

- Robots
- Cars
- Roads
- Pollution
- Lifestyle
- Cities
- Houses...

Robots will replace people

- They will become smarter than people. Robots will work in shops, banks, as lawyers, doctors, pilots...
- Parents will advise children to do some creative work (painter, designer, actor), because robots are not good enough for that.

Pollution

POLLUTION REDUCTION

1. People will realize that they are polluting the planet too much

-Solar-powered cars will be used to reduce pollution.

-Electricity will be generated by the energy of water and the sun.

INCREASE POLLUTION

2. People will continue to pollute the planet

-Death of animals

-Shortening people's lives

-Warming the planet

Flying cars

- Cars like this will help people to perform their daily duties. Going to work will be fast, and will save people time. Also, they will move underwater.

Overheating of the planet

- Overheating the planet can lead to the dissolution of the Antarctic. The amount of water will increase, and no one knows what is under that amount of ice.
- But there is a possibility that it will not melt, in which case people would find a way to live there.

How the cities will look like

- Whole cities will be built on water, but roads will be under water. It will look nicer and traffic accidents may be reduced.

- We will be able to send people to other planets, in order to continue living there and build cities.

Drugs

- Drugs will be made for all diseases, which will prolong people's lives.
- Maybe scientists will discover drugs for unending people's lives.

The number of people on the planet will increase, but there's not going to be enough place for all people in the world.

Africa

- Africa will become more important in the world, if people's education improves.

“Next World”

- Documentary series “Next World” was recorded in 2008 and it shows technologies that will shape the planet.

Everything showed in the
presentation is just
an assumption.

Thanks for watching! 😊
